3. Executive Summary

The project aims to develop a centralized internal platform for a B2B medical insurance company to support and manage its core operational activities.

The business currently relies on paper-based and fragmented processes across multiple teams, including the Planning Team, Policy Team, Accounting Team, Administration Team, and Client Team. This creates a need for a unified system that centralizes operational information and supports consistent collaboration between departments.

The proposed solution is an internal digital platform that brings these business processes into a single controlled environment, complimented by a dedicated web-responsive B2B HR portal for corporate client HR administrators to securely upload census rosters, perform partial commits, and manage member movements within the 24-hour SLA. The platform will not provide a full self-service portal for individual insured members or healthcare providers. External parties interact through approved digital channels and the HR portal while internal users manage operational workflows.

The expected business value is to reduce manual and paper-based work, improve access to accurate information, standardize operational processes, enhance coordination between teams, and provide greater visibility and control over day-to-day insurance operations. In addition, the platform will improve the protection of sensitive employee and insured-member data by replacing insecure paper-based handling with controlled access, role-based permissions, and more secure digital data management.

4. Project Background & Problem Statement

4.1 Business Context

The Egyptian insurance sector is undergoing an accelerated regulatory and digital transformation. The Financial Regulatory Authority (FRA) has introduced a series of regulations supporting electronic insurance operations, real-time regulatory data connectivity, stronger information-security controls, and the broader adoption of financial technology across the insurance sector. The Unified Insurance Law No. 155 of 2024 has also expanded the regulatory framework governing medical insurance and healthcare management activities.

Within this environment, the company operates in the B2B medical insurance sector, where the management of corporate medical insurance requires continuous coordination between multiple internal teams, including Planning, Policy, Accounting, Administration, and Client teams.

Under the current operating model, business activities and information are distributed across multiple channels and formats, including paper-based documents, emails, and manually maintained records. The absence of a centralized operational platform makes information fragmented across departments and increases dependency on manual communication and handoffs between teams.

This operating model results in lengthy processing times for key insurance activities. For example, policy issuance may take up to 14 days under the current process. Manual data handling also increases the possibility of operational errors, duplicate data entry, inconsistent records, and delays in reflecting business changes across the relevant departments.

These challenges are particularly significant in corporate medical insurance, where frequent employee-related changes such as new joiners, resignations, and the addition or removal of dependents require timely updates to insurance records and medical coverage.

The project is therefore initiated to support the transition from fragmented, paper-based, and manually coordinated operations toward a centralized, secure, and controlled digital operating environment. The platform is intended to improve coordination between internal teams, reduce processing time and manual effort, improve data accuracy, strengthen the protection of sensitive employee and insured-member information, and provide greater operational visibility and control.

4.2 Problem Statement

Element	Description
The Problem Of	Core medical insurance operations are currently fragmented across paper-based processes, emails, spreadsheets, and isolated systems used by different internal teams. Policy issuance and endorsements require significant manual coordination, plan and benefit configuration is maintained with limited version control, accounting activities depend on paper, email, invoices, and a separate standalone system, while centralized access governance, auditability, and operational control capabilities are limited or unavailable.
Affects	The fragmented operating model affects the Planning, Policy, Accounting, Administration, and Client teams, as well as corporate clients, HR admins, insured employees, and healthcare providers.
Impact	The current model increases processing time, manual effort, duplicate or inconsistent data, unentitled claim leakage (~5%), and the risk of operational and financial errors. Policy issuance takes up to 14 days, endorsements are delayed, plan changes are difficult to track across versions, and accounting activities require extensive manual reconciliation. Fragmented handling of sensitive employee and insured-member data also limits visibility, compliance, and access control.
Proposed Solution	Develop a centralized internal medical insurance platform and a web-responsive B2B HR portal that connects Planning, Policy, Accounting, Administration, and Client functions within one controlled digital environment. The platform will centralize data, standardize workflows, enforce coverage snapshotting, support 14-digit National ID validation and statutory audit retention, automate monthly billing on the 25th with pro-rata rules and broker commissions, enable immediate digital card deactivation, and eliminate manual fragmentation.

5. Project Objectives

Objective ID	Objective Title	Description
OBJ-01	Reduce Policy Processing Time	Reduce the issuance and activation cycle for complex corporate medical insurance policies from 14 business days to a maximum of 7 business days, while enabling routine employee addition and deletion endorsements to be processed within 24 hours.
OBJ-02	Digitize and Standardize Plan Management	Reduce dependency on spreadsheets and paper records by providing a centralized digital process for managing insurance plans, benefits, coverage rules, and versioning. Enforce Coverage Snapshotting at policy issuance to lock benefit structures while preserving historical traceability.
OBJ-03	Improve Financial Accuracy and Control	Centralize and automate invoice generation, payment allocations, monthly billing cutoffs (25th of each month), pro-rata endorsement adjustments, broker commission calculations, partial payments, and controlled refund approvals to eliminate manual accounting errors.
OBJ-04	Establish Controlled Access and Governance	Establish centralized user, role, and permission management using Role-Based Access Control (RBAC), ensuring least-privilege access. The platform shall maintain 10-year statutory audit records of all administrative and business activities to comply with Egyptian regulatory frameworks.
OBJ-05	Strengthen Regulatory Compliance & Protection	Ensure full compliance with FRA regulations and Law No. 155 of 2024 by mandating 14-digit National ID checksum validation, preserving life-saving inpatient emergency coverage exceptions during policy suspensions, and enforcing strict data privacy controls.
OBJ-06	Centralize Operational Data & Reduce Manual Work	Replace fragmented paper and spreadsheet handoffs with a centralized operational platform shared across internal teams and external HR admins via the B2B portal, reducing duplicate data entry and providing a single source of truth.
OBJ-07	Improve Operational Visibility & Traceability	Provide real-time operational dashboards and tracking into policy, endorsement, billing, and member status history across all business modules.
OBJ-08	Digitize Corporate Client Onboarding & HR Self-Service	Digitize corporate onboarding and establish a web-responsive B2B HR portal enabling client HR admins to upload census rosters (with partial commit for valid rows), submit endorsement requests, and manage member updates digitally.
OBJ-09	Zero Financial Leakage from Unentitled Claims	Reduce unentitled claim payments from 5% to 0% by enforcing real-time digital card deactivation upon member resignation or termination, automatically synchronized with provider network validation systems.

6. Scope (In-Scope / Out-of-Scope)

6.1 In-Scope

Scope Area	Description
Platform & Core Architecture	Centralized internal B2B medical insurance platform covering Client, Planning, Policy, Accounting, and Administration, alongside a dedicated web-responsive B2B HR portal for corporate client HR admins.
Client Management & B2B HR Portal	Corporate onboarding, master data management, and B2B HR self-service portal capabilities allowing HR admins to upload census rosters (with partial commit handling for valid rows), track endorsement SLA progress, and manage company profiles.
Plans & Coverage Snapshotting	Insurance plan configuration, benefit limits, co-pay rules, pricing, versioning, and Coverage Snapshotting (freezing plan benefit structures upon policy issuance to prevent retrospective alteration).
Policy Lifecycle & Compliance	Full policy lifecycle management, member/dependent enrollment with mandatory 14-digit National ID validation, immediate digital card deactivation upon resignation, endorsements within 24 hours, and emergency inpatient exception handling during suspensions under Law 155/2024.
Accounting & Financial Governance	Automated invoicing with fixed 25th monthly billing cutoffs, exact pro-rata daily refund/premium formulas, broker commission calculations, payment allocation, partial payments, and approved refund workflows.
Administration & Audit Retention	Role-Based Access Control (RBAC), permission management, approval authorities, security controls, and a mandatory 10-year statutory audit log retention architecture.

6.2 Out-of-Scope

Out-of-Scope Area	Description
Individual Member Self-Service	Full direct consumer portals or mobile apps for individual insured employees and dependents (access is managed via HR admins and internal teams).
B2C / Retail Insurance	Individual retail insurance products, underwriting, and policy management.
Full Claims Adjudication	Full medical claims adjudication, clinical review engine, and direct provider claim settlement processing.
Provider Financial Disbursements	Direct healthcare provider payment disbursements and hospital financial reconciliations.

External GL / ERP Integration	Real-time bi-directional integration with third-party external general ledger or enterprise ERP systems in Phase 1.
-------------------------------	---

7. Stakeholders & Business Workflows

7.1 Stakeholder Matrix (RACI)

Role	Department	RACI Status	Impact Level
Project Sponsor (S01)	Executive Management	A: Scope, budget & Go-live. I: BRD, plans, audit, security.	High (Power 5)
Lead BA & Policies Lead (S02)	Product & Policies Team	A: Consolidated BRD. R: Policy lifecycle, snapshotting, scope & Go-live. C: RBAC, billing, security.	High (Power 5)
Technical Architect & Admin Lead (S03)	Architecture & Admin	A/R: RBAC, 10-year audit logging, WAF/VPN security. C: BRD, Go-live.	High (Power 4)
Plans Lead & Co-Lead (S04)	Plans Department	A/R: Plan setup, versioning, coverage rules & benefit structures. C: BRD, Policy snapshotting.	High (Power 5)
Accounting Lead (S05)	Accounting Department	A/R: Invoicing, 25th billing cutoff, pro-rata formulas, broker commissions, refunds. C: Scope, BRD.	High (Power 4)
Corporate HR Admin (S06)	Corporate Client HR	A/R: B2B HR portal roster uploads (partial commits), member additions/deletions. C: 24-hr SLA.	High (Power 4)
Clients Lead (S07)	Clients Department	A/R: Client onboarding master data, contacts, contract setup. C: HR portal workflow.	High (Power 4)
Compliance & Risk Manager (S08)	Compliance & Legal	A: Law 155/2024 compliance, 14-digit National ID validation, 10-year audit retention. C: BRD, security.	High (Power 4)

7.2 Key User Personas

Persona Field	S06: Noha Mansour (Senior Corporate HR Specialist)	S03: Eng. Tarek El-Shenawy (Group Super Admin)	Policy Lead: Tamer El-Sayed (Underwriting Team Lead)	Accounting: Ahmed Mansour (Insurance Billing Specialist)
Role & Entity	Senior HR Operations Specialist at corporate client (~600 employees) — External B2B HR Portal User.	Head of Core Systems & Group Super Admin — Internal Administration Module User.	Underwriting & Policy Team Lead — Internal Policies Module User.	Insurance Billing & Accounts Specialist — Internal Accounting Module User.
Primary Goals & Focus	Enroll employees and dependents digitally without paperwork, instant digital cards, and exact monthly invoices.	Provision new branches and configure RBAC roles/permissions directly without developer intervention.	Protect portfolio profitability, eliminate unpriced coverage exceptions, and process endorsements under 24 hours.	Generate automated monthly invoices on the 25th, calculate exact pro-rata adjustments, and ensure 100% matched payments.
Key Concerns & Pain Points	Complex manual data entry screens during hiring rushes, and new hires being rejected at hospital admissions.	Misconfigurations exposing sensitive medical PII or causing system downtime and audit failures.	Excessive automation activating high-risk groups without review, and corrupted census data.	Billing friction with corporate clients due to mid-term member additions and unallocated receivables.
Success Measures	Digital health card active on employee's first day, and invoice headcount matches exact census.	New branch operational in < 3 days, and permission adjustments completed in < 5 minutes.	Reduced loss ratio, zero unentitled claims leakage, and complex endorsements completed in < 24 hours.	100% invoice reconciliation, automated broker commission application, and zero unallocated balances.
Decision Style	Prioritizes usability, time savings, and employee satisfaction; aligns with payroll and executive leadership.	Data- and security-driven; aligns strictly with CISO mandates, compliance policies, and architecture standards.	Risk- and underwriting-focused; prioritizes actuarial compliance, strict National ID verification, and documentation.	Reconciliation-focused; prioritizes mathematical accuracy, auditability, and adherence to billing cutoff schedules.
Preferred Communication	Brief afternoon calls, system alerts, and portal dashboard notifications; busiest during payroll cutoff week.	Written technical specs and concise architectural sessions rather than prolonged meetings.	Structured system exception alerts, digital approval queues, and concise risk dashboards.	Automated financial reconciliation summaries, ERP export logs, and digital payment receipts.
Success Statement	"I upload new hires in two minutes, and they access their active digital cards on their phones the same day."	"I provisioned the new branch in minutes using the administrative wizard, and the audit trail logged every step."	"The system automatically validates census rosters and freezes coverage snapshots, letting me approve exceptions in one click."	"Invoices generate automatically on the 25th with exact daily pro-rata calculations and broker commissions included."

8. Current State vs. Future State

8.1 Current State (As-Is Process)

The current operating lifecycle is fragmented across multiple internal teams and relies heavily on manual coordination. A new corporate client is typically introduced through an Account Manager or another internal contact, with company information, employee data, documents, and commercial details collected through calls, emails, paper documents, and spreadsheets before being entered manually. Plan and benefit information is maintained through spreadsheet-based or manually managed files, with limited centralized version control and history. The Policy team then receives the required client, plan, and employee information through manual handoffs, performs repeated validation and data entry, and processes policy issuance, activation, and endorsements through a largely manual workflow; complex policy issuance can take up to 14 business days. Accounting activities are handled separately through paper records, emails, invoices, and a standalone accounting tool, which increases manual reconciliation and follow-up between policy and financial records. Across this lifecycle, there is no single centralized governance layer for users, roles, permissions, approval authorities, and audit history. As a result, the same business lifecycle is completed through disconnected handoffs between Client, Planning, Policy, Accounting, and Administration-related activities, creating duplication, inconsistent information, limited traceability, and dependency on individuals to coordinate each step.

8.2 Future State (To-Be Process)

The target state is an integrated internal insurance platform combined with a web-responsive B2B HR portal where Client, Planning, Policy, Accounting, and Administration operate seamlessly across the business lifecycle. Authorized corporate HR admins upload census rosters directly via the HR portal, with automated validation (including 14-digit National ID checksums) and partial commit handling for valid rows. Internal users manage client master records, while Planning configures plans with governed versioning and Coverage Snapshotting to lock benefit structures upon policy issuance. The Policy module issues policies, manages member movements, processes endorsements within a 24-hour SLA, and enforces immediate digital card deactivation upon termination to achieve 0% claim leakage. In compliance with Egyptian Unified Insurance Law No. 155 of 2024, emergency life-saving inpatient care is maintained during policy suspensions. Accounting automatically generates invoices based on a fixed 25th monthly billing cutoff, calculates exact pro-rata daily adjustments, computes broker commissions, and manages partial payments. Administration enforces RBAC, system security (WAF/VPN), and a 10-year statutory audit trail retention architecture.

9. High-Level Functional Requirements

Req ID	Requirement Description	Priority
BR-001	The system shall allow authorized internal users to create, maintain, and validate corporate client master data, contacts, documents, payment terms, and related client information.	Must Have

BR-002	The system shall provide a web-responsive B2B HR portal for corporate client HR admins to manage census rosters, upload employee files with partial commit for valid rows, and track endorsement requests.	Must Have
BR-003	The system shall allow authorized users to create and configure insurance plans, including coverage components, limits, deductibles, co-pay/co-insurance, pricing, eligibility, waiting periods, exclusions, pre-existing-condition rules, riders, and direct-billing rules.	Must Have
BR-004	The system shall enforce Coverage Snapshotting upon policy issuance, freezing the benefit structure for the policy term while maintaining plan version history and approval workflows.	Must Have
BR-005	The system shall manage the full policy lifecycle (issuance, activation, endorsements, renewals, suspensions, cancellations) with traceable status history and a 24-hour SLA for member endorsements.	Must Have
BR-006	The system shall perform mandatory 14-digit National ID checksum validation for all members and dependents in compliance with Egyptian Unified Insurance Law No. 155 of 2024.	Must Have
BR-007	The system shall trigger immediate digital card deactivation upon member resignation or termination to prevent unentitled claim leakage (OBJ-09).	Must Have
BR-008	The system shall support emergency life-saving inpatient care coverage exception handling during policy suspensions as required by Law No. 155 of 2024.	Must Have
BR-009	The system shall execute monthly billing cycles on a fixed 25th calendar day cutoff, calculating premiums, pro-rata daily adjustments for mid-term additions/deletions, and broker commissions.	Must Have
BR-010	The system shall maintain a mandatory 10-year statutory audit trail architecture preserving all business, financial, administrative, and permission records.	Must Have

10. Non-Functional Requirements

10.1 Performance & Scalability

NFR ID	Requirement Description
NFR-PERF-01	The system shall process bulk census rosters uploaded via the B2B HR portal within 5 minutes for up to 2,000 member records, supporting partial commit execution.
NFR-PERF-02	The platform shall support seamless scalability for growing corporate client accounts, member populations, active policy versions, and monthly billing calculations without performance degradation.
NFR-PERF-03	The system shall enforce transactional integrity across cross-module event flows, ensuring zero data loss during billing runs, card deactivations, and policy snapshot creation.

10.2 Security & Compliance

NFR ID	Requirement Description
NFR-SEC-01	Access to sensitive client, member, policy, and financial data shall be strictly governed by Role-Based Access Control (RBAC) and least-privilege principles across internal and portal interfaces.
NFR-SEC-02	The platform shall maintain an immutable, tamper-proof audit trail retaining all administrative, user access, and business transaction logs for a mandatory 10-year statutory period.
NFR-SEC-03	All data at rest shall be encrypted using AES-256, and data in transit shall use TLS 1.3 across public endpoints and WAF/VPN channels for external integrations.

11. Integration Points

System / Module	Integration Type	Data Flow & Purpose	Frequency
B2B HR Portal → Policy	Secure Web Portal / API	Transmits employee census uploads (partial commit), addition/deletion endorsement requests, and member updates directly to Policy.	Real-time / On demand
Plans → Policy	Internal Integration	Passes approved plan versions to Policy and freezes benefit structures via Coverage Snapshotting upon policy issuance.	Event-driven
Policy → Accounting	Internal Event Integration	Sends active policy data, endorsement additions/deletions, and effective dates for 25th monthly billing runs, pro-rata formulas, and broker commissions.	Scheduled & Event-driven
National ID Verification Service	External Secure API	Validates 14-digit National ID checksums and identity details in compliance with Egyptian Law No. 155 of 2024.	Real-time

12. Success Criteria — Definition of Done

12.1 Key Performance Indicators (KPIs)

KPI ID	Success Measure
KPI-01	Reduce complex corporate policy issuance and activation cycle time from 14 business days to a maximum of 7 business days.
KPI-02	Complete routine employee addition and deletion endorsements within 24 hours of submission via the B2B HR portal.
KPI-03	Achieve 0% unentitled claim financial leakage by enforcing immediate digital card deactivation upon member resignation/termination.
KPI-04	Freeze 100% of policy benefit structures at issuance via Coverage Snapshotting to eliminate retrospective drift.

KPI-05	Achieve 100% compliance with 14-digit National ID validation and retain complete statutory audit records for 10 years.
--------	--

12.2 Business Definition of Done (DoD)

DoD ID	Completion Criterion	Status
DoD-01	Scope, objectives, and system-level requirements approved by the authorized Sponsor and key stakeholders.	Approved
DoD-02	B2B HR portal workflows, partial roster upload commit mechanisms, and 24-hr endorsement SLAs documented and validated.	Approved
DoD-03	Law No. 155 of 2024 compliance features (14-digit National ID checksum, emergency inpatient exception, 10-year audit log) validated.	Approved
DoD-04	Coverage Snapshotting at policy issuance and digital card deactivation rules for zero leakage verified.	Approved
DoD-05	Financial rules including 25th monthly billing cutoff, exact pro-rata daily formulas, and broker commission logic configured.	Approved

13. Risks, Issues, Assumptions & Dependencies

13.1 Risks & Mitigation

Risk ID	Risk Description	Impact	Mitigation Strategy
RSK-01	Plan alterations mid-term could inadvertently alter active policy coverage benefits.	High	Enforce Coverage Snapshotting at policy issuance, freezing policy benefit terms against retrospective plan edits.
RSK-02	Delayed HR removal of resigned employees leads to unentitled claim expenses at providers.	High	Automate digital card deactivation immediately upon termination entry via the B2B HR portal (OBJ-09).
RSK-03	Non-compliance with Egyptian Unified Insurance Law No. 155 of 2024 resulting in regulatory penalties.	High	Implement mandatory 14-digit National ID validation, emergency inpatient coverage exception handling during suspensions, and a 10-year audit log.

13.2 Assumptions & Dependencies

ID	Type	Description
ASM-01	Assumption	Corporate client HR administrators will utilize the web-responsive B2B HR portal for member roster management and endorsement submissions.
ASM-02	Assumption	National ID verification services will respond in real time to support member enrollment checksum validation.
DEP-01	Dependency	Automated monthly invoicing depends on policy endorsement sync before the fixed 25th calendar day billing cutoff.

14. Modification History

(Cross-referenced with Section 1.1)

15. Glossary

Term	Definition
BRD	Business Requirements Document
B2B HR Portal	A web-responsive self-service portal for corporate HR admins to manage employee census rosters and endorsements.
Coverage Snapshotting	The mechanism freezing an insurance plan's benefit structure at policy issuance to protect against retrospective changes.
Partial Commit	Uploading valid census rows successfully while flagging invalid rows for HR correction instead of rejecting the entire file.
RBAC	Role-Based Access Control; access rights granted based on assigned organizational roles.
